

- To bore jaws on the chuck

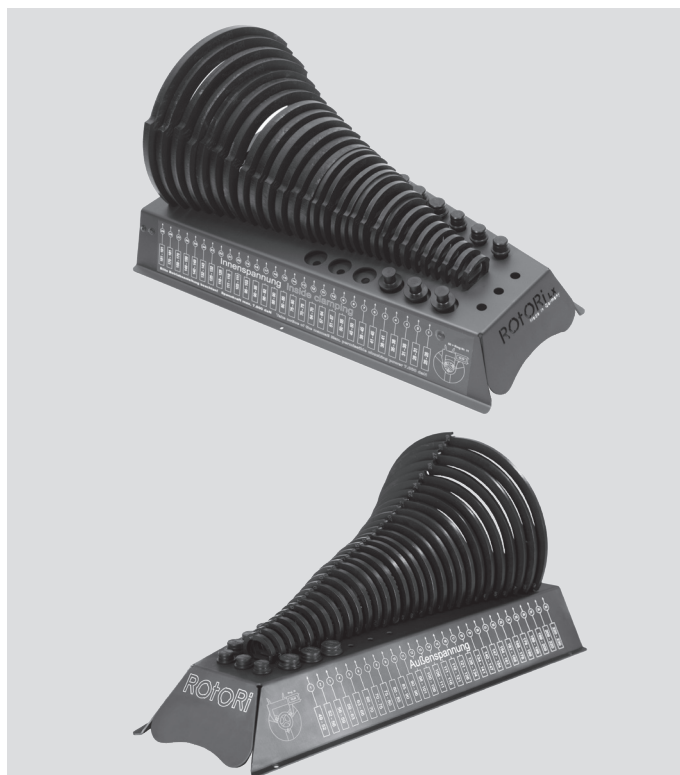

Jaw boring set ROTORI

With the ROTORI boring set, clamping jaws can be turned out with high precision under clamping pressure and hard clamping jaws can be ground out.

The set consists of several rings in different dimensions. The desired clamping diameter can be set continuously via the curve segments. Further readjustment of the clamping point is possible.

Your advantages

- **High flexibility**
 - Internal- and external clamping with 1 ring
 - Infinitely adjustable clamping range
 - Suitable for chuck sizes 80 - 1.600 mm, for 2-, 3-, 4-, and 6-jaw manual- and power chucks
 - Optimal accessibility of the turning tool
- **High precise**
 - 0.1 mm accurate infeed of the clamping diameter
- **Increased profitability**
 - Low set-up costs thanks to Rotofix clamping bolts
 - Fast and flexible handling
 - High cost savings on clamping jaws
