

# D-VARIO

Diaphragm chuck  
FLEXIBLE MODULAR SYSTEM

## Main dimensions and technical data

## Application/customer benefits

- Flexible solution for grinding with quick adjustment for short set up times

## Technical features

- Adjustable, modular jaw system for clamping different work pieces with the same jaws
- Key Lock System for quick positioning of the pitch of different work pieces
- Micrometer fine adjustment of the center line
- For small, medium and large batch sizes
- Workstop with medium feed for air sensing and integrated coolant nozzles optional
- Jaws for O.D. clamping (Type A) optional
- D-Vario Configurator: free application to configurate your set up ([www.smw-autoblok.de/qr/vario](http://www.smw-autoblok.de/qr/vario))

## Standard equipment

Diaphragm chuck D-Vario (with mounting bolts)

## Optional accessories in the modular system:

### Pitch line clamping

- 6 different jaw sets for different outside diameters
- Key Lock System for different pitches of gears (see figure A, B and C)
- Clamping pins for different modules (Dia. of ball  $\varnothing$  3,0 mm to 6,0 mm)
- Locators

### O.D. clamping (Type A)

- 4 different jaw blanks for different outside diameters
- Factory finished jaws
- Locators

## D-VARIO Configurator Software:

- Safe and quick configuration of all set-ups for different gears
- Web-APP: from anywhere with any device feasible (internet access needed)
- Data export possible

With this free of charge D-Vario configurator a complete top jaw and the corresponding locator with the locator pins can be configured for your gears.

The export function allows you to save your results on your PC.

### A: Number of teeth is divisible by 3

Example of application:  
gear with number of teeth  $[z] = 30$

- ▶ Specification of Key Lock System:  
3x Key straight

### B: Number of teeth is not divisible by 3

Example of application:  
gear with number of teeth  $[z] = 31$

- ▶ Specification of Key Lock System:  
1x Key straight,  
2x Key for number of teeth 31

### C: Number of teeth is not divisible by 3

Example of application:  
gear with number of teeth  $[z] = 32$

- ▶ Specification of Key Lock System:  
1x Key straight,  
2x Key for number of teeth 32

## Configuration of the set up for pitch line clamping within only 5 steps:

At first you need to choose your matching top jaw (size 1 - 6) for the outside diameter [ $d_a$ ] of the gear to be machined. Each size of top jaw can cover 20 mm outside diameter using two different types of clamping pins (Type A and B). One set of top jaw consists of 3 pieces including 1 straight key lock insert.

The determination of the spherical clamping pins is made according to the ball dimension of the gear. There are 2 types of clamping pins: Type A for the first 10 mm of the clamping range of the top jaws. Type B for the second 10 mm of the clamping range of the top jaws.

Optionally prelocator pins are available. Prelocator pins are used at automatic loading. The determination is made according to the clamping pins used.

One set of Key Lock insert consists of 2 keys. Gears, which number of teeth that is divisible by 3 can be machined with 3 of the same type Key Lock insert (straight). For all gears, which number of teeth is not divisible by 3, there are different key insert sets available according to the number of teeth. The Key Lock inserts are the same for all 6 sizes of top jaws.

The following types of locator bases are available:  
Type A: without air sensing / without nozzle for coolant  
Type B: without air sensing / with nozzle for coolant  
Type C: with air sensing / with nozzle for coolant  
The height of the locator posts is depending on the gear.

### V. Locator base

#### Locator base

Determination of height of locator posts:  
 $\Delta$  = Distance between clamping position and locating face  
 Height of locator posts [H] = 32,5 mm -  $\Delta$

Clamping position = 1/2 serration length / at longer serrations it is the requested clamping position.  
 In case the lowest face is not the locating face, please ask our customer service.

\* Jaws are factory finished according to the specified clamping diameter.  
Note: The clamping diameter must be specified in case of order.

## Device

### Device for machining of the blank jaws type A

Jaws type A sizes 1 - 6	631296
-------------------------	--------

The device is needed to pre-machine the blank jaws type A. Then, the jaws must be finish ground to the clamping diameter on the D-Vario chuck. For this operation, the jaws have to be clamped with the grinding rings.

## Grinding rings (1 Set = 2 pieces)

### Recommended grinding rings (1 set = 2 pieces)

Jaws type A sizes 1 - 6	631309
-------------------------	--------

### Grinding data:

1. Grinding	A1	D = 177.0 mm	residual jaw stroke 0.25 mm
2. Grinding	A2	D = 176.9 mm	residual jaw stroke 0.20 mm
3. Grinding	A3	D = 176.8 mm	residual jaw stroke 0.15 mm
4. Grinding	A4	D = 176.7 mm	residual jaw stroke 0.10 mm

The clamping diameter A1 is used for the first finish grinding process. The smaller clamping diameter of the grinding rings (A2-A4) are used to regrind worn or damaged existing jaws.
